

You think moving out costs \$3,000. It's closer to \$7,200.

Between 40 and 60% of young adults who move out end up moving back in at least once. This is the guide built to prevent that.

Most people plan around "three times the rent." The real number is closer to \$7,200 — and the gap is why people move out in March and move home in November.

Fourteen steps, in order. The real cost. Getting approved with thin credit. Finding a place without getting scammed. The lease clauses that cost you money. And the first ninety days, which is where it usually falls apart.

- Your real move-out number, in four buckets
- Credit from zero in six months
- The cover letter that beats a better credit score
- Lease red flags, clause by clause
- The 30 minutes on move-in day that protect your deposit
- A money system built on how people actually behave

Every figure in this book is cited. Built on 218 sources from HUD, the CFPB, the FTC, the Bureau of Labor Statistics, the USDA, the Harvard Joint Center for Housing Studies and peer-reviewed research — including a section on where the evidence is weaker than the popular claim.

THE 14-STEP SYSTEM

The Move-Out Blueprint

Leave your parents' house — and don't move back in

Your real number. Your real date. The steps between here and your own front door.
